This installation guide provides detailed step-by-step instructions for do-it-yourself projects. We invite you to read it carefully and then keep it handy for reference. You can also view each step on the accompanying video. For additional information, visit our website at www.beonstone.com.
INTRODUCTION

Discover the world of Beonstone! A world of distinctive products for creating or transforming a living space—in just a few hours!

Lend your home an incomparable touch of style and elegance with the natural look of Beonstone panelized stone siding.

This innovative product’s unique design combines the refined appearance of stone with simple, efficient installation and unsurpassed performance. Stylish indoor and outdoor projects can be completed in a few short steps and offer the protection of an exclusive integrated drainage system.

Each model of Beonstone panelized stone siding comes in 18 different stamped forms that perfectly reproduce the random look of natural stone.

*Beonstone brings a contemporary look to stone!*

---

**PATENTED D.RAIN SYSTEM**

The DRAIN system is built into the back of every panel. It automatically aligns, blocks and anchors the panel into the framing and ensures safe drainage in the event of water infiltration.

**Mechanical anchoring system**
- Screw panels directly into the substrate.
- Panels attach firmly
- Maximum stability

**Integrated colour**
- Panels are made from richly coloured concrete.
- Will not discolor
- Colour remains intact even if the panel is damaged

**Drainage**
- Any water infiltration is automatically drained to the bottom of the wall.
- Prevents excess humidity and mildew
- An air space allows the wall to ventilate

**Self-aligning and self-blocking system**
- Designed for quick installation and better alignment of panels over a large surface.
- Easy to install
- Structurally strong
Beonstone panelized stone siding are easy to install and require few tools. You probably have most of them already.

You will need a drill, screwdriver, table saw and concrete hand grinder, as well as a level, measuring tape and sheet metal cutters. Be sure to wear appropriate safety equipment: safety boots, hard hat, safety goggles, mask, gloves and earplugs.
MATERIAL

The unique design of Beonstone

Beonstone offers a truly unique design. Some simple material is all you require to complete interior or exterior projects that are stylish and durable.

Take a few minutes to consider the material you need. Then choose Beonstone panelized stone siding products so you can complete your project like a professional.

Beonstone panelized stone siding
610 mm x 305 mm x variable (24 in. x 12 in. x variable)

Beonstone starter strip
1220 mm x 48 mm (48 in. x 1 7/8 in.)

Beonstone transition sill cap
813 mm x 89 mm x 51 mm (32 in. x 3.5 in. x 2 in.)

Beonstone lighting fixture plate
254 mm x 200 mm x 51 mm (9.5 in. x 7.5 in. x 1.5 in.)

Beonstone window sill cap
813 mm x 89 mm x 51 mm (32 in. x 3.5 in. x 2 in.)

Beonstone electrical outlet plate
200 mm x 152 mm x 51 mm (8 in. x 6 in. x 1.5 in.)

Beonstone cornerstone
254 mm x 191 mm - 165 mm x 64 mm (10 in. x 7.5 in. - 6.5 in. x 2.5 in.)

Beonstone anticrosive screw
STEP 1
MATERIAL REQUIRED

1.1 Calculate the material required

Before starting your project, calculate the quantities of material you will need. Beonstone panelized stone siding are designed to fit in corners without any additional special material. Simply measure the length (L) and multiply it by the height (H).

Beonstone panelized stone siding

To determine the number of panels required, calculate the surface area of the wall to be covered. Multiplying the length by the height (L x H) in feet gives you the total number of square feet. Divide this number by 2.

Example: L (16 ft.) x H (8 ft.) = 128 sq. ft. ÷ 2 = 64 panels

This gives the number of panels required. It is recommended that you add an extra 3% for waste during installation.

Table to calculate the number of Beonstone panelized stone siding
(1 panel = 2 sq. ft.)

Measurements in feet

Table to calculate the number of starter strips
(1 strip = 4 li. ft.)

Measurements in feet

Your list of materials is ready to order

- Beonstone panelized stone siding
- Starter strips (order a few extra)
- Window sill caps
- Transition sill caps for partial walls
- Stainless steel screws (see the table)
- Tubes of sealant
- A 300-ml (10-oz) tube of PL Premium adhesive
- Elastomeric waterproofing membrane air/water
- Building cladding tape (Tuck Tape)

Calculate the number of units for a gable side wall

In the case of a gable, it is recommended to calculate the rectangular surface (A x B – Illustration A) rather than the triangular surface. There will be a greater loss (Illustrations B and C).

Illustration A

Illustration B

Illustration C

* Approximative loss
Starter strips

To calculate the number of starter strips required, measure the length of the wall to be covered (in feet) and divide by 4. Each starter strip is 1220 mm (48 in.) in length.

Example: \( L \ (16 \text{ ft.}) \div 4 = 4 \text{ starter strips} \)

1. **Self-tapping anticorrosive wood screw (stainless steel or MAGNI galvanized treatment)** with a hex washer head in compliance with standard ANSI/ASME 18.6.1. Dimensions: #10 (0.190 in. exterior diameter) threaded right to the head and the correct length for the wall type.

2. **Self-drilling and self-tapping anticorrosive metal screw (stainless steel or MAGNI galvanized treatment)** with a hex washer head in compliance with standard ASTM F593. Dimensions: #10 (0.190 in. exterior diameter) threaded right to the head.

3. **Self-tapping anticorrosive concrete screw (stainless steel or MAGNI galvanized treatment)** with a hex washer head screw in compliance with standard ASTM E488. Dimensions: ¼ in. (0.250 in. exterior diameter)

*NOTE: Before installing Beonstone panelized stone siding, ensure that the plywood or OSB is properly attached to the framing with appropriate screws.*
STEP 2
PREPARATION

2.1 Identify the type of wall

Before beginning the first step, ensure that the construction of the wall you intend to cover with Beonstone panelized stone siding meets industry standards.

There are many types of wall. You need to choose the correct screw for your wall so the installation complies with regulations and is secure. Check the table in section 1.1 to select the correct length and appropriate type of screw.

Here are some of the more common types of wall:

<table>
<thead>
<tr>
<th>EXTERIOR INSTALLATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard framed wall with studs spaced 16 or 24 inches c/c covered with OSB or ½-inch plywood</td>
</tr>
<tr>
<td>Standard framed wall with studs spaced 16 or 24 inches c/c covered with OSB or ½-inch plywood and 1½-to-2-inch rigid insulation</td>
</tr>
<tr>
<td>Poured or block concrete wall</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>INTERIOR INSTALLATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard framed wall with studs spaced 16 inches c/c covered with gypsum, OSB or ½-inch plywood</td>
</tr>
<tr>
<td>Concrete foundation with wood furring spaced 16 inches c/c covered with gypsum, OSB or ½-inch plywood</td>
</tr>
</tbody>
</table>

2.2 Condition of surface to be covered

It is very important to ensure the integrity of the surface to be covered. Thus we strongly recommend the installation of a water weather-resistant barrier (see the manufacturer’s installation guide).

2.3 Marking the wall

(if you need to anchor in the frame)

Identify the type of wall to be covered and use an electronic detector or construction nails to locate the framing studs in the wall.

Starting at the first stud, measure and then use a pencil to mark the location of the framing with vertical or horizontal lines. These lines will serve as a guide so you can rapidly screw the panels in place.

You are now ready to install the starter strip.

TIP FROM THE PROS

BEFOREHAND, ALL OPENINGS SHALL BE PROPERLY SEALED, THEREFORE PROTECTED AGAINST WATER INFILTRATION.
THE STARTER STRIP

2.4 Installing the starter strip

Now proceed to install the starter strip along the full length of the wall to be covered. This strip has perforations for draining any water that may infiltrate.

Using a laser or standard level, mark a horizontal line 215 mm (8 ½ in.) above the floor planned base of the stone wall (Illustration A). This line marks the top of the starter strip.

Screw the starter strip in place. For a standard framed wall with flexible siding (gypsum, insulation or bitumen board), screw into every framing stud. For other wall types, screw every 305 mm (12 in.) for a solid installation. Leave a 6 mm (¼ in.) space between the strip and any openings to allow for normal expansion due to changes in temperature.

Apply a building cladding tape on the upper part of the starter strip.

Attention

When installing an interior wall, screwing only into the drywall is not recommended. It is important to fasten screws into the wall framing.
3.1.1 The first row

Beonstone requires two fasteners through the top plastic strip, and one through the vertical strip on the right-hand side.

Beonstone panelized stone siding are designed to interlock perfectly. To install the first row, simply anchor each panel in the starter strip.

Cut a Beonstone panel and set it in place on the wall. Use three screws to fasten the panel into place. For all types of walls, be sure to fasten at least one screw in the framing. If the panel has been cut, only two screws are required.

Continue installing panels until the first row is complete (Illustrations A, B, C, D).

TIP FROM THE PROS
WE RECOMMEND TO ADEQUATELY MIX PANEL PROFILES TO AVOID REPETITION PATTERN.

Illustration A

Measure

Illustration B

Illustration C

Illustration D
3.1.2 The second row

To ensure that the panels are positioned to reproduce the appearance of natural stone, it is important to offset the alignment of the vertical joints.

Cut a Beonstone panel in two and set one section in place to start the second row (Illustration E). Screw the panel in place.

Continue installing panels until the second row is complete (Illustration F). Continue with the subsequent rows until you are close to the top of the wall (Illustration G).

TIP FROM THE PROS
FOR MAXIMUM PRECISION, WE RECOMMEND CHECKING THE LEVEL AS EACH ROW IS INSTALLED, ON THE CONCRETE AND NOT ON THE PLASTIC EDGE OF IT.
3.1.3 The final row

You have reached the last step in your wall project: installing the final row. To install this row, you need to cut Beonstone panelized stone siding lengthways.

Measure the space remaining from the last row installed to the top of the wall (Photo A) and cut a panel to fit.

Pre-drill the panel (Photo B).

Use a countersink bit to create a bevelled hole for the screw head (Photo C).

Set the panel in position and screw it in place (Photos D and E).

Hide the screw heads with coloured caulking similar to the stone. You can create a perfect match by mixing some stone dust with a bit of transparent caulking.

Use screws that are 50 mm (2 in.) longer to attach the last row.

TIP FROM THE PROS

WE RECOMMEND THAT YOU INSTALL THE LAST TWO ROWS AT THE SAME TIME IN ORDER TO ALLOW ENOUGH SPACE TO SLIDE THE LAST PANEL INTO PLACE. LEAVE ¼ INCH BELOW THE CEILING OR FINISHED SURFACE TO FACILITATE INSERTION (Illustrations A, B, C).
INSTALLATION OF THE LAST ROW

Leave 6 mm (¼ in.) below the ceiling or finished surface for setting the last row of panels in place.

Panels cut to size

Screw through the panel at the top.
STEP 3
WALL WITH AN EXTERIOR CORNER

3.2 Exterior corner

First, apply an elastomeric waterproofing membrane air/water directly on the water weather-resistant barrier on both sides of the outside corner. The elastomeric waterproofing membrane must cover a minimum of 100 mm (4 in.) on each side of the corner.

Beonstone panelized stone siding are designed to interlock perfectly. When forming an exterior corner, however, you need to prepare two panels by removing part of the plastic backing.

Preparing two panels for an EXTERIOR CORNER

Following the marks on the back of the panel, remove part of the plastic and metal backing with metal cutters (Panels A and B).

To ensure that the panels are positioned to reproduce the appearance of natural stone, cut the second Beonstone panel in two (Panel B).

Set the two panels in place to form a corner (Illustration A). Fasten the panels in place. Ensure that the panels are properly aligned and then finish screwing them in place.

When you make a straight cut in a panel (such as panel B), it is IMPORTANT to seal the joint with silicone to ensure that it is watertight (Illustration B).

Continue installing panels until the first row is complete (Illustrations C, D, E, F).
WHEN YOU MAKE A STRAIGHT CUT IN A PANEL (SUCH AS PANEL B), IT IS IMPORTANT TO SEAL THE JOINT WITH SILICONE TO ENSURE THAT IT IS WATERTIGHT.
### STEP 3

**WALL WITH AN INTERIOR CORNER**

#### 3.3 Interior corner

First, apply an elastomeric waterproofing membrane air/water directly on the water weather-resistant barrier on both sides of the inside corner. The elastomeric waterproofing membrane must cover a minimum of 175 mm (7 in.) on each side of the corner.

Beonstone panelized stone siding are designed to interlock perfectly. When forming an interior corner, however, you need to prepare one panel by removing part of the plastic backing.

**Preparing two panels for an INTERIOR CORNER**

Following the marks on the back of the panel, remove part of the plastic and metal backing with metal cutters (Panel B).

To ensure that the panels are positioned to reproduce the appearance of natural stone, cut the second Beonstone panel in two (Panel B).

Set the two panels in place to form a corner (Illustration A). Fasten the panels in place. Ensure that the panels are properly aligned and then finish screwing them in place.

When you make a straight cut in a panel (e.g., panel B), it is IMPORTANT to seal the joint with silicone to ensure that it is watertight (Illustration B).

Continue installing panels until the first row is complete (Illustrations C, D, E, F).

---

**TIP FROM THE PROS**

WHEN YOU CREATE AN INSIDE CORNER, IT IS RECOMMENDED TO USE THE BLOCKS SPECIALLY MARKED WITH A POINT TO OBTAIN AN AESTHETIC AND EFFICIENT JOINT.

WHEN YOU CUT PANEL B, SET ASIDE THE REMAINING SECTION (B1) TO START THE SECOND ROW.
WHEN YOU MAKE A STRAIGHT CUT IN A PANEL (e.g., PANEL B), IT IS IMPORTANT TO SEAL THE JOINT WITH SILICONE TO ENSURE THAT IT IS WATERTIGHT.

TIP FROM THE PROS – WHEN YOU CREATE AN INSIDE CORNER, YOU MAY OCCASIONALLY USE A GRINDER (BUFFER) TO OBTAIN JOINTS LESS THAN 3 MM (1/8 IN.) BETWEEN THE ARCHITECTURAL PANELS.
**STEP 4**

**ARCHITECTURAL DETAILS**

4.1 Beonstone sill caps

Window and transition sill caps play an important role in preventing any possible infiltration by water.

Beonstone sill caps are designed for easy installation and provide the watertight protection required by exterior walls. Their unique form features a 3° slope to drain water away from the wall.

A metal strip embedded in the back of sill caps makes them easy to install with Beonstone panelized stone siding.

**TIP FROM THE PROS**

WHEN MULTIPLE PARTS ARE REQUIRED (WINDOW SILL OR TRANSITION) IT IS VERY IMPORTANT TO SEAL THE ENDS WITH A CLEAR SEALANT.
In a new construction, we recommend that part of the window pops 50 mm (2 in.) relative to the water weather-resistant barrier.
STEP 4
ARCHITECTURAL DETAILS (CONTINUED)

4.2 Installing around a window or door

When the wall you are covering includes a window, we recommend that you install Beonstone sill caps before the final row of panels under the window (Illustration A).

Measure the distance between the last row of Beonstone panels and the bottom of the sill cap (Illustration A). To shape the first piece for under the window, you will need to make two cuts in a stone panel (Illustration B). Allow 3 mm (1/8 in.) clearance between the window and the sill cap. Seal around the sill cap carefully.

To install the next piece, measure the height between the last row and the bottom of the sill cap, and cut a panel lengthways to fit.

Slide the piece into position (Illustration C) and screw it in place. Follow the instructions for installing a final row of panelling (see pages 12–13) by pre-drilling the panel (Photo A).

Use a countersink bit to create a bevelled hole for the screw head (Photo B).

Set the panel in position and screw it in place (Photo C).

Hide the screw heads with caulking of a colour similar to that of the stone. You can create a perfect match by mixing some stone dust with a bit of transparent caulking.

Continue adding rows until you reach the top of the window. Be very accurate in cutting panels.

To prevent the panels over the window from rocking, screw them at the bottom as well as through the plastic anchor strip (Illustration D). Follow the same procedure as for a final row (see pages 12–13). Refer to the cross-section on page 27 for installation details.
4.3 Installing a transition sill cap

First, apply an elastomeric waterproofing membrane air/water over the transition sill cap. The elastomeric waterproofing membrane must cover a minimum of 25 mm (1 in.) and a minimum of 100 mm (4 in.) against the back wall (see detailed cross section p. 25).

If you are covering only the lower part of a wall with Beonstone panelized stone siding, it is important to install a sill cap to ensure a watertight transition. Install Beonstone panelized stone siding up to the desired height (Illustration A). Set the sill cap on top of the last row and screw in place (Illustration B).

Refer to the cross-section on page 25 for installation details.

4.4 Column and protruding wall

During the construction of a column, it is strongly recommended to use an optimal rough dimension of 545 mm (20 ¾ in.) to minimize cuts and get an aesthetically perfect finish (the overall column dimension will be 650 mm (25 ¼ in.) x 650 mm (25 ¼ inches).

If you choose to build a protruded wall surface such as a fireplace or an architectural detail, it is recommended to use optimal dimension such as of 610 mm (24 in.) to minimize cuts and get an aesthetically perfect finish.
Discover the world of Beonstone!

Discover the world of Beonstone, where attention to detail makes the difference. Beonstone panelized stone siding are paired with special accessories designed to improve your living space.

These timeless accessories are manufactured from high-quality concrete of a neutral shade that matches all Beonstone products and colours. They make it easy to install wall outlets and outdoor lighting.

All you have to do is carefully measure the space required, then cut an opening in the panel. We recommend making the opening a bit larger than the plate, about 6 mm (¼ in.).

Use a concrete grinder and a drill to make an opening in the centre of a panel.

Panels with an opening for a receptacle are installed in the same manner as any other panel.

Use PL adhesive to fasten the plate in place and ensure that it is watertight.

These accessories can also be used for indoor projects.

Beanstone brings a contemporary look to stone!
